About Me

Over 5 years of experience building interfaces of varying complexity and purpose. I specialize in frontend development for high-load products: designing architecture, delivering solutions from idea to production, and owning stable delivery of changes. Main stack — JavaScript/TypeScript, React, and the ecosystem of modern frontend development tools.

I have hands-on fintech production experience aligned with banking security and quality standards. I focus on performance, reliability of client applications, and predictable releases: from API contracts and integrations to automated checks in the development process.

Core strengths: ownership, systems thinking, and cross-team collaboration. I run code reviews, mentor teammates, participate in architectural decisions, and improve team engineering practices. I also speak at professional conferences and share knowledge with the developer community.

Career

SBERBANK

June 2023 —

Present

Senior Frontend Developer

- Brought 3 frontend solutions to production from scratch (AI chat, informational snippet/ticker, and partner onboarding module): from an empty directory to full production operation under banking security standards.
- Designed frontend architecture and coordinated API contract collaboration with backend teams, ensuring technical consistency and predictable feature delivery.
- Contributed to production release processes for frontend products, implemented integrations with internal and external services, and automated key checks, reducing regression risks and manual operations.
- Implemented asynchronous data processing and staged loading in client applications, improving UI responsiveness under high load and user experience when working with large datasets.
- Owned frontend implementation of an AI support chat: built the UI, integrated APIs, and ensured stable client-side behavior in close collaboration with backend, analytics, and support; reduced average response time from 4 hours to 10 minutes.
- Built an informational ticker for client interfaces with flexible commission and tariff parameter configuration, improving transparency for end users and simplifying maintenance for the product team.
- Developed a partner onboarding module used by cross-functional teams (security, KAM, and other stakeholders); delivered inter-team integrations

and added SAST/OSS checks to every pull request in line with banking security standards.

Sitesoft

August 2021 —

May 2023

Frontend Developer

- Owned support and modernization of 30+ projects of varying complexity for major clients, ensuring release stability and evolutionary frontend development.
- Designed and implemented a reusable component and template system, reducing time-to-launch for new projects by 40%.
- Built internal component and utility libraries, standardized frontend development approaches, and improved solution reusability across the team.
- Performed systematic legacy refactoring and reduced technical debt, improving client-side performance and simplifying further project evolution.
- Organized project internationalization by introducing a unified localization approach for UI and content, which simplified scaling to new languages and reduced release-time errors.

UNIT6

July 2020 —

August 2021

Junior Frontend Developer

- Developed user dashboards with data management and user settings capabilities, improving everyday user workflows within the service.
- Built promotional websites and landing pages with animations and interactive elements, increasing user engagement and visual communication quality.

Freelance

July 2019 —

July 2020

Frontend Developer

- Built an information portal for an educational institution with a content management system, enabling convenient content publishing and updates for editors.
- Developed responsive landing pages and e-commerce websites with payment integrations, ensuring reliable user flows across devices.
